--

Victoria's recycling crisis is appalling, especially as we are now in a climate emergency. I am opposed to waste to energy and want the government to make it easier for everyone to generate less waste in the first place, recycle more and produce less landfill. We need a container deposit scheme to encourage recycling and reduce pollution of our environment. We need a way to reduce land fill waste by supporting soft plastic recycling as well as collecting and using food waste to generate compost individually and/or by councils. We need to ban single use plastics like straws, ear buds and stirrers as England has just done and ban unnecessary packaging on fresh fruit and vegetables. Everyone wins, jobs will be created, business' of the future will grow and gain momentum, it will put our name in history as a progressive state that lead the way to help avert the worst impacts of climate change and the environmental crisis.

Our future is your responsibility and we are relying on you to think big and be bold!
