Inquiry Name: Inquiry into Recycling and Waste Management

Ms Sylvia Worboys  

### **SUBMISSION CONTENT:**

--

There is a need for product and packaging manufacturers to take on board product stewardship. This applies to the basic household food, cleaning substances as well as e-devices and other electrical goods onto building materials. Even packaging for agricultural products silage bales, animal feed etc. Labeling is not for coming as to the type of plastics, recyclability and method/location. It is essential the recycling process be made easily available to everyone and that an industry to deal with collection be developed in Victoria/Australia and not overseas. Grants for small community accessible centres etc. Changes to labelling etc. Photo files to show inadequate labelling of everyday packaging and how many single use plastics are on one shelf of a domestic fridge.
