Our submission

To the Committee

In late 2014 early 2015 Yarragon and District Community Association conducted a survey as to whether the community would like to see on shore gas mining conducted in our area. The results were an over whelming 96% against.

The major concerns in our area is the fact that we are situated in a food bowl, on a flood plain, and there is extensive use of under ground water, there fore the possible contamination of under ground aquifers is of great concern. As there can also be seismic activity in our area there are concerns about leakage from wells into aquifers.
