**Subject:** Fracking

Dear Committee,

Apart from the damage to our environment, farming productivity, there is the potential of significant damage to water-table and unknown damage possibilities for geology generally. Therefore as a community member I am strongly opposed to fracking, especially at this juncture where the evidence of damage seems to be increasingly emerging. Treating our environment with disrespect is increasingly rebounding to the detriment of humanity. Please do not add to it with your decisions.

Yours Sincerely,  
Janene Swalwell
