**Subject:** Submission to the Environment & Planning Committee Inquiry into Unconventional Gas in Victoria

To the Environment and Planning Committee,

I personally feel that the extraction of Unconventional gases is unnecessary as a resource both for the now and the future. I believe that solar, wind and tidal renewable generation of energy is the only way forward. Gas and carbon based energy generation is a waste of fiscal resources, environmentally destructive and highly undesirable.

The industry is irresponsible, untrustworthy and self serving, it offers nothing to the community and only leaves a legacy of damaged land and water resources, threatens agricultural industries and threatens the health of our citizens.

Victoria will be better off without Unconventional Gas Industries. Please make it so.
