**Subject:** Fracking in Victoria.

**I am absolutely opposed to gas Fracking in Victoria, or anywhere else for that matter!**

It is an imported and thoroughly discredited technology for energy extraction that will benefit the Australian user **not at all** and put at risk precious farmland, water tables, extended rural incomes, and existing tourism and environmental projects. In an age where populations are becoming ever more aware of clean energy alternatives governments that persist with destructive forms of energy are themselves becoming discredited and treated with growing community distrust!

Australians in general are becoming tired and angry about the global corporate finance juggernaut that has no responsibility beyond its bottom line of profit and no long term prospects for employment that will in any way equal the value of activities already established on the land they will destroy!

**I am absolutely opposed to gas Fracking our land!**
