Our water and unconventional gas mining.

Just how much do you value the water that comes out of your tap? Next time you turn on your tap imagine what it would be like if the water was poisonous OR nothing came out of your tap.

How would you feel about being totally dependent on a multi-national company's good will to keep you supplied with clean, fresh water for all your needs? Do you believe that a multi-national company would take the responsibility to supply all the towns, dairies, sheep farmers, cattle farmers and people who need to irrigate their crops, with clean, fresh water?

This would not be for a week, a year, or even a decade, but for longer than you or I will be alive, and then it will be our children's turn to be dependent on these people.

'How could this possibly come to pass?' you may be asking.

The answer is JUST ONE major accident/ mistake/shortcut made possibly by only one tired worker, while drilling or operating a gas well.

No amount of scientific research, no endless regulations, no number of safety checks or snake

tongued assurances by mining companies will protect our life blood with 100% certainty against JUST ONE mistake that could ruin us all.

So, think hard and long about unconventional gas mining and then turn on your tap.

Lois Doeven, Gas Field Free Drumborg.
