Thankyou for the opportunity to submit my response to this very important issue that will affect everyone in this state.

I am totally opposed to CSG and any new coal mining licences here in Victoria.

I believe that our state should be looking at powering our electricity with renewable resources instead of finite ones. Other countries are showing us that renewable resources are the only way to go for the future of our planet.

Please consider the environmental and physical impacts of all of us when determining your findings.

The people of South Gippsland have had a very good opportunity in the last five years to understand that we are not wanting to be sold out to mining companies for their own selfish profiteering.
