Subject: New Submission to Inquiry into Unconventional Gas in Victoria.

Inquiry Name: Inquiry into Unconventional Gas in Victoria.

Mrs Carol Wilmink
[REDACTED]

[REDACTED]

SUBMISSION CONTENT:

--

1. Water is vital for our existence.
2. Australia is the driest continent on earth.
3. The mining of Unconventional Gas uses large amounts of water.
4. The mining of Unconventional Gas has the serious potential to pollute the water in subterranean water tables for areas well outside the areas being investigated for gas.
5. Australia has the potential for water, wind and solar collection for power resources. Gas is not vital as a power source for this country.
6. I believe most of the gas is exported.
7. Australia, at all levels of government, is primarily responsible for the welfare of its own residents first. This includes the environment in which they live, and their potential to have adequate water and food resources. Both of these are threatened by the investigations required to find Unconventional Gas, AND ITS MINING.
8. I believe that the extraction of "Unconventional Gases - Coal Seam Gas, Shale Gas, & Tight Gas" should not be permitted in Victoria.
