Dear Planning & Environment Committee members

I have stayed in touch with this issue via the media as it directly concerns the future of rural communities and Victorians in general. I have serious concerns around the impacts of unconventional gas on the health of Victorian people and the Victorian environment.

I believe that the unconventional gas industry should not go ahead in Victoria. And as a matter of priority, the Government should investigate the potential benefits, opportunities and needs for the renewable sector to make a major contribution to our energy generation mix and to our export sector.

Kinds regards,
Harry
