Please do not go forward with unconventional gas extraction - fracking! There is undeniable evidence that the process of extracting gas by fracking pollutes the water table which affects the drinking water for humans and livestock. Fracking also destroys the environment by making farming impossible on land that cannot support plants. And thereby causes a knock on affect of causing job losses for farmers, graziers and nursery men+women. Do the right thing and not allow fracking to come to Victoria. Are energy needs can certainly be lessened by proper economics and pursuing the use of sustainable, renewable energy sources. Of particular relevance is the replacement of carbon based energy sources by using solar, wind and or tidal power. We can make Victoria and dare I say all of Australia, an example to the world by stopping the support for fossil fuel based energy needs. Do it now! Thank you for reading this.
