I oppose the proposed fracking due to harmful impacts it will have on Victoria`s resources, namely, the water table.

I urge decision makers to realise that water is a more precious resource than coal seam gas. I Victoria we are blessed with many natural resources to provide our state with renewable energy, such as solar and wind power. There are many options to ensure that we have abundant and non-exhaustive power sources into the future, as well as the associated economic benefits to our population of developing a strong renewable energy industry.

In short, I oppose the proposed fracking due to irreversible impacts that would be likely to result on our precious natural resources, and the associated impacts this could have on our health.
