Subject: Please stop fracking

To the Inquiry into Unconventional Gas

Dear Committee Members,

I beg you to consider the following;

Fracking is a dirty process and should be stopped until its safety is proven. The process emits noxious gas and destabilizes the soil.

Farmers should have the right to use all of their land and not be pushed off by mining. Fracking and farming are incompatible. Transnational companies don't care about Australians or who they push off their farms.

Security of food and water should be ensured, especially as climate change will cause a drier environment and Government policy will increase our population exponentially.

Sincerely,

Helen Pereira
