--

I am extremely concerned about the possible negative effects from unconventional gas exploration. It is a risk to food security, our environment and our health. The threat to our water supply is huge. It is not fair to effectively force people to let companies on their land given the potential side effects. There is enough evidence from people living near where they are conducting unconventional gas exploration of negative effects. Government is supposed to protect the people over and above profit. Please keep that in the forefront of your minds. Thank you
Claire McFee
