--

It is absolutely imperative that UCG is not permitted in any form in Victoria. We must maintain our food bowl areas to provide food for an ever increasing population, both here and overseas. Once UCG is started, areas will be ruined forever - as it is impossible to undo the damage caused.

Once we have exhausted solar, wind, wave power sources, then lets consider UCG. By the time these have been exhausted there will be other 'clean' energy sources, therefore UCG will never be required!

Gas consumption is dropping, as other forms of energy become more popular and appropriate, another reason why this process will be obsolete soon !

Please do not destroy our country-side by permitting this grab for cash.

Thankyou
