I wish to strongly object to the pursuing of Unconventional Gas anywhere,at any time in Victoria. I reside in country Victoria where food production and tourism are the major economic drivers. I believe Unconventional Gas would seriously threaten both of these activities.

This practise of extraction,under its many names,is unsustainable so therefore not a long term answer to energy production anywhere.

The destruction of land, which seems inherent with this process, is only the start of a list of problems. Add in the detrimental effect on water and air quality,in areas where onshore gas extraction has occurred, such as Queensland and New South Wales and you start to think "why would you do this extraction?"

The social division and health problems, created by this exploration, in regional communities and the trend of long-term farming families leaving their land in effected areas is also very worrying.

What are the legal rights of property owners?

How will the waste be disposed of?

Why are renewables not being pursued?

Please represent your constituents honorably and say NO TO UNCONVENTIONAL GAS!
