To the Committee

I am a passionate believer that energy can be sourced from renewables if we want it to be.

We have an abundance of sun wind and wave to see us into a future that is not going to poison us with unconventional gas exploration

I am among many that see this exploration as a way for energy companies and multinationals to take this supply at the cost of Australians

In the US it has been shown that the human costs along with the environmental costs will result in the communities that are in these areas being forced to suffer the ongoing ills and toxins that are a bi product of these processes.

I am pleading with the current Government to halt all further exploration and exploitation of this process for the future benefit of all that is good about our communities and our country

Kindest Regards

John Turner
