**Subject:** New Submission to Inquiry into Unconventional Gas in Victoria.

Inquiry Name: Inquiry into Unconventional Gas in Victoria.

Ms Anna-Marie Callil

**SUBMISSION CONTENT:**

--

Please do not proceed with the development of fracking and coal seam gas production in Victoria. There is undeniable evidence to suggest that climate change is occurring now and at a rapidly increasing rate. I feel that Australia is not doing enough to reduce harmful greenhouse emissions. This may seem like a viable short-term solution but in reality it's doing very little to help our environment in the long-run. In fact I believe that it will only make matters worse for future generations. We can not go on ignoring the welfare of occupants of our beautiful country and the globe at large. I believe that Victoria should strive at all costs to set a better example to other states and work more on developing more planet friendly renewable energy sources such as wind and solar power. Please do more to protect our environment. Yes, our economy is important but the environment is more important. Economic ruin will undoubtedly prevail if the environment is destroyed. Come on, let's get proactive!
