

To whom it may concern,

I am totally against any form of coal seam gas mining. Having grown up in Yallourn I have seen first hand of the health impacts and environmental devastation that fossil fuel mining causes. Whilst I have reaped the benefits of solar power I can recommend it as a future source of power and it would be more cost effective to subsidize it than encourage mining which would spoil our tourism, water quality and agricultural land. I would like to leave my area in a better state than when I was born, don't we owe this to our grandchildren. Sincerely, Marg Desira.
