Subject: submission for Inquiry into Unconventional Gas Victoria

To Whom It May Concern

I am concerned about the environmental and community health ramifications of unconventional gas and its exploration in Victoria.

I believe the elected parties need to take the community's concerns into serious consideration when making Laws and amending them.

We are lucky to live in a country that has alternative energy choices and these need to be developed and explored.

Victoria needs to move with the times and put its people's community and environmental concerns first. I live in the Dandenong Ranges, on the edge of Gippsland and love the lifestyle, community and tourism options that area possesses. To endanger or threaten - and to not nurture this region for the future of all Victorians - would be a serious misadventure.
