Unconventional gas fracking has too many unknowns to it. Contamination of ground water, chemical ridden waste water and unsightly roads / drills is just not compatible with farmland and tourist areas, such as along the Great Ocean Road.

In this day and age, we should be supporting renewable energy sources - not coal and natural gas. The subsidy of those is not a level playing field as far as cost.

The biggest concern at this time is what type of world are we leaving our grandchildren. How unforgiveable to leave them nothing when we have had everything and have the ability to leave things better for them. Even if there is the slightest doubt, we owe it to them to be conservative and go renewables.

Please do not ruin farmland, water aquifers and prime tourist areas for the profit of a few, greedy, non-community supportive individuals.
