

To the Environment and Planning Committee

I am totally opposed to the unconventional gas industry operating in Victoria.

There is no need for us to take the risk that this industry holds. Victoria should be focussing on 100% renewables - solar and wind power. We are ideally located to benefit from and be leaders in the renewables industries. The renewables industries hold the key to innovation and employment without a long tail of environmental pollution and serious health risks.

Coal seam gas industries are increasingly being recognised for the damage they cause and are being banned around the world

Please respect the wishes of your communities and do not allow this industry to pollute our precious agricultural lands nor impact our health.

Thank you

Jan Wild
