

To the Environment and Planning Committee,

I recently purchased solar panels to supplement my electricity usage. I have also joined a supplier who offers me electricity supplied from 100% renewable sources. This costs me more - but I believe in putting money where my values lie. I am prepared to do the same for gas - which heats my home.

I am not a high income earner, but when I look at the children and think what a mess this world is going to become if I do not invest in their future, then the decision to spend more right now was not hard to make.

Look ahead - think what this land, this city, this planet will be like in 2030, 2050?

Stand up with me and support these values for a safer, cleaner Victorian.

- We don't need an unconventional gas industry in Victoria to supply energy. Unconventional gas is not a renewable source of energy - it is polluting, contributes to climate change, and is not required as a fuel to transition between fossil fuels and renewables. We can make a planned transition to 100% renewables in Victoria without the need for gas as a 'bridging' fuel, but we need to start investing in real renewables like solar and wind power now.
- We don't need an unconventional gas industry in Victoria to provide employment. Supporting and growing our renewables industry will provide more jobs that are future-proofed and lead to greater long-term employment growth in Victoria. Growth in our renewables industry provides a valuable opportunity for re-skilling and redeploying workers who need help to transition from traditional energy production roles – there are now more people employed installing solar panels in Victoria than in coal generation.
- Other jurisdictions like New York City and Ohio have already instituted permanent bans on coal seam gas, and Victoria should follow suit, as this is what the community wants.
- Coal seam gas carries massive and proven risks for the environment and health. It threatens our environment, land productivity, agricultural industries, our water supply, our communities and public health, and the risks are far too great to be mitigated or outweighed by any benefits.
- Victorian communities don't want unconventional gas. At least 30 communities have already declared themselves gasfield-free, and the number continues to grow. The Government needs to respect the wishes of Victorian communities.

You must act for the betterment of all Victorians - not just an short term economic solution that is short of a sustained long term healthy vision of Victorians.

Jenny Gardner
