

I wish to submit my opposition to coal seam gas exploration and mining in Victoria. I live in south-west Victoria and cannot see any need for coal seam gas. With the recent huge advances in solar and wind power and the efficient storage of power, coal seam gas and other traditional energy sources are fast becoming the dinosaurs of the energy scene.

My objections are based on environmental, land productivity, public health, water contamination, property rights and so many more issues.

No coal seam gas for Victoria – we don't need it. We do need cheap, clean and plentiful energy sources such as solar and wind. This is where the future of energy supply lies not only in Victoria but the world
