

To the Environment and Planning Committee,

- We don't need an unconventional gas industry in Victoria to supply energy. Unconventional gas is not a renewable source of energy - it is polluting, contributes to climate change, and is not required as a fuel to transition between fossil fuels and renewables. We can make a planned transition to 100% renewables in Victoria without the need for gas as a 'bridging' fuel, but we need to start investing in real renewables like solar and wind power now. Nor should we be experimenting with our earth... the science is still out on the effects of fracking
