Subject: Submission to the Environment & Planning Committee Inquiry into Unconventional Gas in Victoria

To the Environment and Planning Committee,

- We don't need an unconventional gas industry in Victoria to supply energy. Unconventional gas is not a renewable source of energy - it is polluting, contributes to climate change, and is not required as a fuel to transition between fossil fuels and renewables. We can make a planned transition to 100% renewables in Victoria without the need for gas as a 'bridging' fuel, but we need to start investing in real renewables like solar and wind power now.
- We don't need an unconventional gas industry in Victoria to provide employment. Supporting and growing our renewables industry will provide more jobs that are future-proofed and lead to greater long-term employment growth in Victoria. Growth in our renewables industry provides a valuable opportunity for re-skilling and redeploying workers who need help to transition from traditional energy production roles – there are now more people employed installing solar panels in Victoria than in coal generation.
- Other jurisdictions like New York City and Ohio have already instituted permanent bans on coal seam gas, and Victoria should follow suit, as this is what the community wants.
- Coal seam gas carries massive and proven risks for the environment and health. It threatens our environment, land productivity, agricultural industries, our water supply, our communities and public here and the risks are far too great to be mitigated or outweighed by any benefits.
- Victorian communities don't want unconventional gas. At least 30 communities have already declared themselves gasfield-free, and the number continues to grow. The Government needs to respect the wishes of Victorian communities.

I cannot understand why government bodies would allow permits for unconventional gas mining, when there is so much scientific evidence to show that it is not good for health reasons, it is not good for environmental reasons as it contaminates the water table. It is not good because they are already starting to pull back on production up on the northwest shelf because the market for liquid gas is diminishing. There are numerous reasons listed above as to why the people of Victoria and Australia do not want unconventional gas mining, so why won't the government respect the wishes of the people they are supposed to be representing.

We do not live in a feudal system where the people are mere peasant and the government is all powerful so please listen to the people.

Maureen Campbell
