To the inquiry panel,

I sell organic (spray free) produce from our property. Our farm is called Sweet View Farm and is located 30mins out of Geelong in Paraparap.

Our goal is to provide healthy chemical free produce to our local area and expand into other regions, while keeping the food miles to a minimum. Our philosophies to reduce impact on the environment are very strong and this drives all of our procedures on the farm.

We also try to educate our customers on the importance of green and chemical free food.

If a CSG well/well's were introduced to our area, this would make our style of farming almost impossible and would not be able to market our food as chemical free and green. Our region has very strong environmental ethics and really care for our region, by always improving the farming methods we are using.

My business would not survive with the introduction of CSG to our region. Please consider the communities and current businesses in Victoria . CSG would destroy our area.

There are already many great submissions with lots of technical information noting the risks and damaging environmental impacts of CSG practices, I do not need to re list to them to you. But I am coming from a small agricultural business owner and asking you to please not destroy our jobs and livelihood by allowing CSG in Victoria.

Regards  
Kristin
