**Subject:** Parliamentary Inquiry into Unconventional Gas

[REDACTED] [REDACTED]

Fracking and coal seam gas are unnecessary for our energy needs and should not be allowed as an industry in Victoria. The likelihood of an incident is possible and the consequences are major and not able to be mitigated. The risk, therefore is too great.

- Victoria needs a permanent ban on all unconventional gas.
- Protecting Victoria from fracking and other unconventional gas will protect existing jobs, especially in agriculture and tourism.
- There's no way that the risks to farming land and our water resources can be safely managed. We saw from the Hazelwood mine fire that regulatory systems can fail, and that failure can lead to environmental and public health disasters. It is not worth the risk.
- According to the Australian Energy Market Operator, there is no gas shortage in Victoria or anywhere else in Australia, so there is no need to risk the health of crucial farmland just to extract gas that we don't need.
- No amount of Victorian gas production will reduce the prices that consumers have to pay. Gas prices have increased because LNG exports from the east coast have linked us to international markets where prices are higher. A Victorian gas industry will not save consumers money. The best solution for consumers to reduce gas bills is through energy efficiency initiatives.

Kind regards,  
Lana Kagan
