Subject: Stop Fracking in Vic

[REDACTED] [REDACTED]

Dear Sir/Madam,

I'm submitting an application for reasons why Fracking should be permanently banned in Victoria. The following list of reasons makes me feel very concerned that it should not go ahead:

Some of the points you might like to include:

- Protecting Victoria from fracking and other unconventional gas will protect existing jobs, especially in agriculture and tourism.
- There's no way that the risks to farming land and our water resources can be safely managed. We saw from the Hazelwood mine fire that regulatory systems can fail, and that failure can lead to environmental and public health disasters. It is not worth the risk.
- According to the Australian Energy Market Operator, there is no gas shortage in Victoria or anywhere else in Australia, so there is no need to risk the health of crucial farmland just to extract gas that we don't need.
- Victoria needs to transition rapidly to zero net emissions. There is growing evidence of fugitive emissions (ie. leaking) from unconventional gas processes, showing that gas is not as clean as once thought, and there is no time for fossil fuels that are just less dirty. Gas therefore has no place in Victoria's future energy mix. If Victoria is to be considered a leader on climate change, the government cannot allow a new gas industry to be established.
- No amount of Victorian gas production will reduce the prices that consumers have to pay. Gas prices have increased because LNG exports from the east coast have linked us to international markets where prices are higher. A Victorian gas industry will not save consumers money. The best solution for consumers to reduce gas bills is through energy efficiency initiatives.
- My main concern though is that we'll mess up our underground aquifers permanently without any real good reason.

Please consider our future, our environment and the citizens of Victoria. All the best in making the right decision.

Nigel Heywood
