--

Victoria needs a permanent ban on all unconventional gas...This is 2015..we have an OBLIGATION to use other means of generating energy that do not deplete resources and create pollution. We need to protect Victoria from fracking and other unconventional gas to protect existing jobs, especially in agriculture and tourism.

There's no way that the risks to farming land and our water resources can be safely managed. We saw from the Hazelwood mine fire that regulatory systems can fail, and that failure can lead to environmental and public health disasters. It is not worth the risk.

According to the Australian Energy Market Operator, there is no gas shortage in Victoria or anywhere else in Australia, so there is no need to risk the health of crucial farmland just to extract gas that we don't need.

Victoria needs to transition rapidly to zero net emissions. There is growing evidence of fugitive emissions (ie. leaking) from unconventional gas processes, showing that gas is not as clean as once thought, and there is no time for fossil fuels that are just less dirty. Gas therefore has no place in Victoria's future energy mix. If Victoria is to be considered a leader on climate change, the government cannot allow a new gas industry to be established.
