Subject: Submission to the Environment & Planning Committee Inquiry into Unconventional Gas in Victoria

To the Environment and Planning Committee,

It is amazing that in this day and age of renewable energy that more energy is not directed to renewables rather than so last century methods as fracking for gas, which carries its own inherent dangers that I feel sure the committee is aware of.

I am sure that members must know the feeling of the majority of people is against the risks entailed in fracking and would not be swayed by the Hype of "look Over there Gas" lets go get it mentality, and blow the consequences.

It is long term planning the people want and need, not an opportunistic grab for the quick buck with all the possible adverse consequences that may bring.

I trust the committee will do its job and reject any notion of CSG and which is not to the needs of our state. I urge you to recommend a permanent ban on such poisonous practices and suggest that Government funds be directed to renewables.

Spiridon Fragopoulos
