Fracking may well produce useful gas. But,

- fracking is relatively new, and hence its safety is inevitably suspect;
- fracking endangers the ground water;
- if we contaminate our ground water, there's no way to uncontaminate it; and
- contaminating our ground water would be a mega problem producing multiple adverse effects that would persist effectively for ever.

So, I don't think that the risk is worth taking.

So I request that fracking should be banned in Victoria (and, indeed, elsewhere too!)
