SUBMISSION CONTENT:

--

My submission is short but to the point in that it is inappropriate for road safety agencies to support road side safety barriers that are a safety feature for cars and trucks, but a threat to motorcyclists. When it is also considered WRB's are not only a danger to some road users but are also more expensive to install, cost more to maintain and repair than other types of barriers, we all need ask what is then the justification for using them?
