### **YOUR SUBMISSION**

**Submission:**  
Hello

Thank you for the invitation to provide a submission.  
There are a number of ways the air quality in Victoria can be improved.

1. Close the coal-fired power plants.
2. Incentivise electric vehicles.
3. Improve public transport to match the best world standards.
4. Ban the burning of wood fires in the cities and large regional towns.
5. Provide EPA with the tools and strength to monitor and fine industries contributing to the pollution load.
6. Improve building standards to a minimum of 8 stars which in turn will decrease the demand for electricity.
7. Encourage and incentivise the building of all-electric housing. Ban gas connections from new builds.

Thank you for your time considering my submission.

Yours sincerely  
Mark Gordon
