YOUR SUBMISSION

Submission:

I strenuously object to the Cultural and fire reduction burns that are being conducted on our east coast where we were ravaged by fires only a year ago. DELWP and cfa are burning areas that became the only unburned habitat for our native insects animals and birds. I have seen these burns 1st hand and they are still smouldering in hollow logs and habitat trees long after the 'Environmental Burn' . I have a Diploma in Natural Resource Management. I also have problems with lung function after living through the fires within 10k of my home last year. Now I have flare up issues with my breathing due to the smoke from these local forest burn offs. I am finding it mentally and physically difficult to cope with this smoke. It is also impacting on tourism here as people don't want to breath in this smoke. I appeal in this submission to halt all burning off and consider the health of our humans and animals in this time when we are trying to heal.
