Subject: Submission into the Inquiry into Ecosystems Decline in Victoria

Categories: Submissions

Dear committee,

Thank you for the opportunity to provide a submission to the Inquiry into Ecosystems Decline in Victoria.

Humans are pretty rubbish at noticing what is missing. As land is cleared for McMansions, as native forests are logged to support a few jobs and as our nature reserves are developed for soft shoe tourism, people get used to the new normal. I can remember in the 1960s when our garden was full of butterflies of many species and the dawn chorus was so loud you threw shoes at it. Today, I'm lucky if a cabbage white floats by and the dawn chorus is degraded to a couple of blackbirds. No one notices the loss. As we chip away at our natural environment for no good reason, but the profit of a few, we lose a part of ourselves. Over 3 million Australians are on antidepressants, a sign of how disconnected we have become from our natural state. Visit a mega shopping centre and you'll see kids whinging and screaming. Visit a park or reserve and you'll see them laughing and creating.

Victoria's current environment laws don't do enough to protect what little we have left. With the massive destruction of ecosystems from the fires and drought, we need to protect everything we have and put back what we have lost, not chip away at it bit by bit. We need radical new nature laws to protect our ecosystems and stop this razing of nature.

Victoria's environmental laws should be the foundation for addressing ecosystem decline in the state which has been a steady and ongoing process since colonisation. Key contributing drivers include land clearing, impacts of urban expansion, over extraction of natural resources such as water and timber, and the introduction of invasive species. Further to this climate change is now amplifying these threats which makes addressing this issue much more urgent.

The Inquiry into ecosystems decline in Victoria should take into account the following reforms to help ensure that we make the most of this opportunity:

1. Resource and implement the Flora and Fauna Guarantee Act 1988. The Flora and Fauna Guarantee Act is the centrepiece of Victoria's biodiversity conservation legislation. Reforms last year have "refreshed and modernised"

the Act, updating the objectives, adding a new duty for public authorities, and introducing new conservation tools. However, none of these reforms will be worth the paper that they're written on if they are not properly implemented.

2. Make sure our nature protection laws are climate ready. The past summer's devastating bushfires demonstrate the terrible impact that climate change can have on our wonderful natural places and wildlife. Climate change presents a massive challenge to Victorian ecosystems. Failing to address climate change stops our laws working effectively. Climate adaptation must be a part of our legal frameworks.

3. Improve compliance and enforcement with our environmental laws. A significant change was made last year when, following a damning review of timber harvesting regulation in Victoria, the government established the Office of Conservation the Regulator. This move, while a welcome recognition that the implementation and enforcement of our nature protection laws needs to be improved, does not go far enough. We need an independent conservation regulator with a clear legislative foundation and all the legal powers needed to ensure Victoria's conservation laws are complied with.

4. Protect Victoria's precious wildlife. Victoria's Wildlife Act 1975 is out of date and no longer meets community expectations when it comes to protecting our precious wildlife. It should be reformed to make sure that it meets the Victorian community's expectations for how our valued wildlife will be protected and preserved for future generations.

5. Prevent the harmful impacts of new development. While the Morrison government is in a hurry to handover responsibilities under our national environmental law - the Environment Protection and Biodiversity Conservation Act - to state governments, we know that Victorian laws are not fit for purpose. Victoria's planning laws and environmental impact assessment laws need to be brought up to date to make sure that infrastructure projects properly account for their impacts on Victoria's biodiversity before we even think about handing over responsibilities.

6. Stop the drivers of ecosystem decline. Nature protection laws should be a safety net. We need to address the pressure on Victorian biodiversity protection laws by removing key drivers of ecosystem decline such as native forest logging, unsustainable use of water resources, and the impact of invasive species. Stopping native forest logging sooner rather than later, more sustainable water resource management, and new fit for purpose invasive species management legislation are needed if ecosystem decline is to be turned around.

7. Boost ecosystem restoration. Nature protection laws alone will not be enough – our laws must also guide and encourage the restoration of Victoria's ecosystems. With climate change already having a terrible impact on Victorian flora and fauna, the challenge is urgent. Whether it be on public land or private land, our land management must be subject to appropriate obligations to ensure that ecological processes and natural assets are there for future generations to enjoy.

Strong nature protection laws will provide the backbone for a healthier future for Victoria's ecosystems, ensuring the people, places and wildlife we love can thrive for generations to come.

Thank you for considering my submission.

Yours sincerely,

Janette Allison
