--

I am most concerned that Victoria's flora and fauna are under threat. I have 12 grandchildren and want to leave them a legacy of a healthy thriving environment. Bushfires and the climate emergency have impacted catastrophically so that our flora and fauna are endangered. Please ensure that Victoria has robust environmental Laws to safeguard what is left and build a strong recovery. Please do not further log the fire ravaged forests. They need to be left alone and let nature take its course. And please ensure there is no further logging of native forests. Employ indigenous people to manage our forests and manage burns as they are the true masters of caring for the land and its animals and flora. And please don't allow developers and miners to decimate our wonderful bush. Please ensure that the rivers flow and are not used needlessly for growing unsustainable crops and thus depleting our rivers.

More native trees need to be planted all farmers should be encouraged to plant more trees on their farms to reduce our carbon footprint and provide more habitats for our wildlife.
