Subject: Submission to inquiry into ecosystem decline in Victoria

Categories: Submissions

Natural ecosystems support our health by filtering our air, providing fresh water and food, regulating our climate and protecting against the spread of disease and pests. They also foster our psychological and spiritual wellbeing and serve as places of recreation and sources of nature-based jobs in tourism and other vocations

I am concerned about the loss of grasslands, and the failure to secure the Western Grasslands Reserve; and the continued logging in the native forests of the Central Highlands and Gippsland, which further threaten the unique ecosystems of Victoria.

Greg Rowles
