Subject: Fix our recycling for better productivity

RE: INQUIRY INTO RECYCLING AND WASTE MANAGEMENT

Single use plastics needs to be drastically reduced in grocery shopping. There are other ways to wrap things ie banana leaves or other types of biodegradable wrapping.

Offering refundable options for plastics, 10c bottle returns, great way for kids to make money and gives people a reason to pick up the rubbish.

Investing in our recycling industry will prove to be a large investment but well worth the effort, employment opportunities for a lot of people, reusing and reducing our waste, maybe reduce all those single use plastics down so we can reuse them again for the strawberries in the grocery shopping. Make it full circle, use and reuse over and over again. Bring back milk bottles, wash and reuse. Have supermarkets full of stock that people bring in containers to fill up themselves. Make all councils have green bins that pick up food scraps and get composted down.

This industry can create so much employment and offer amazing options to keep everything out of landfill, or to bring landfill down to minimal levels.
