RE: INQUIRY INTO RECYCLING AND WASTE MANAGEMENT

We need to be bold and resolve 3 key issues of recycling;

Food waste needs to be included in the green bin program to reduce methane generation in tips and drive smarter use of a valuable compostable material.

All package must be recyclable in the first place to reduce confusion/contamination in recycling bins. We need to phase out non recyclable packaging asap. There are alternatives so it's about choices here.

Setup a national recycling centre to take recycling material from across the country to make it a viable business investment.
