RE: INQUIRY INTO RECYCLING AND WASTE MANAGEMENT

As a citizen of Australia, I am concerned that I am angry that my carefully separated rubbish is all going straight to landfill. Packaging materials like polystyrene and waxed cardboard containers are a scourge in our environment and should be banned from production.

Dealing with the waste produced by packaged consumables should be a priority for our governments. As an abundance of science around recycling already exists, government should be developing industry here in Australia and creating jobs to solve this huge and growing problem.
