RE: INQUIRY INTO RECYCLING AND WASTE MANAGEMENT

We are doing our part and our government is not when it comes to recycling.
If the purity of the recycled waste was an issue they should have campaigned to improve this situation rather than letting it be and ending in China refusing our recycling.
Even more ideal would have been facilitating investment for new processing plants to be created on shore rather than exporting our rubbish offshore. Or a single use plastic ban and tax?
The current infrastructure of recycling is a waste of resources if these materials are ending up in landfill.
This is a matter of urgency now!!!
Please act now!
