**Subject:** Better systems for rapidly changing planet

RE: INQUIRY INTO RECYCLING AND WASTE MANAGEMENT

At this point it is clear that to ensure our kids still have a liveable planet we need to change the way we do things. These systemic changes need to do no harm for the planet as a first rule of operation.

Some suggestions for a new recycling system include:

1. Ban plastic bags
2. Start, promote and incentivise a local composting scheme - neighbour to neighbour
3. Invest in local food growing land
4. Start local recycling centres who collect, separate and reuse
5. Create a system that can be profitable, measure the impact, publicise the results
