RE: INQUIRY INTO RECYCLING AND WASTE MANAGEMENT

I would like to see a way of recycling and reusing kitchen scraps on a large scale. Instead of rotting in plastic bags and creating methane, I would like kitchen waste to be binned in a separate bin and sent to a giant compost bin and processed into compost which can then be used by farmers to fertilise crops.

I would like single use plastic packaging to be banned. There are heaps of products still sold in hard plastic non recyclable packaging.

I would like to see investment in companies which have the technology of turning plastic, glass and metal into other products such as 3d printing plastic. We have the technology let's use it.
