RE: INQUIRY INTO RECYCLING AND WASTE MANAGEMENT

I wish the state government would ban the use of plastic bags and do something constructive to reduce the volume of plastics that are currently ending up in landfill in our state. A deposit on bottles would be a start. Next effective recycling of plastic waste. Not the ineffective processes that are happening now. People take the effort to separate plastic waste but it still ends up in landfill because the Victorian State Government can't put into place an effective waste management process
