RE: INQUIRY INTO RECYCLING AND WASTE MANAGEMENT

It baffles and saddens me that in the year 2019, as a well established, wealthy society we cannot accomplish one of the most simple things for the environment and our people - recycling! As a member of said society, I do my duty to reduce the amount of waste I create and recycle what I have left over to protect this planet and it's future. It is a disgrace that the government, who is supposed to be leading this state, cannot do the same.

Simple measures to take include:

Container deposit scheme

Incentives for corporations to use recycled plastic Infrastructure to process plastics into recycled materials Enforcing large corporations to take ownership over the waste they create through taxes Make curbside composting state wide
