RE: INQUIRY INTO RECYCLING AND WASTE MANAGEMENT

The producers of single use plastics and the companies that choose them for their products need to be help accountable for the waste they are producing. There are some items that can only be bought in single use plastic and many people do not have the means or resources to seek out those that don't. A tariff could be applied based on sales of any product in single use plastic. If that eats into profits, businesses will soon find a solution to their packaging problem.
