RE: INQUIRY INTO RECYCLING AND WASTE MANAGEMENT

we need legislation and government financial backing for industry to support recycling plastics so that plastic products need to be made from recycled products. This needs to be supported by government to assist industry. We need to establish a market that promotes use of non plastic products and support that industry with legislation and incentives to drive market force. Promoting glass bottle return will assist with re use and recycle of glass product. An absolute ban on single use plastic with legislation and industry incentives to reduce landfill and pollution to the environment, injury to wildlife. We need leadership and a long term vision and investment in good land and resource stewardship.
