RE: INQUIRY INTO RECYCLING AND WASTE MANAGEMENT

Like an increasing number of Australians, my family & I are appalled by the lack of waste management. Living in in Melbourne we were dismayed by the recent fire which again released toxic chemical waste polluting the city.

Needless to say no-one will be punished for this or any other environmental crime, but it's time for politicians to take action on the increasing waste pile up; of not only toxic substances, but plastics, bottles, cans & other human waste polluting our environment. We urge you to make a start somewhere to address this environmental crisis, for the sake of our health & the future.
