RE: INQUIRY INTO RECYCLING AND WASTE MANAGEMENT

The recent problems with recycled rubbish collection has highlighted the important need for developing out local recycling industry.

Our community needs to think creatively and reuse and recycle our rubbish locally. It would create more jobs, produce more Australian made products and save the cost of shipping rubbish to Asia.

We should introduce a 10c refund on bottles and cans, which is proving successful in other states.

Banning single use plastics is important for the environment, especially sea life.

We need to increase educating the community about better ways to deal with this huge problem, such as refusing to buy over packaged goods, reusing materials when possible and composting more. Local large scale composting systems should also be established.
